Anechka, (Анечка, Anya)

an [UCI](#) compliant chess engine by [Sergei Nefedov](#), written in [Delphi](#). The program was developed incrementally, starting with [board representation](#), [generation](#), [make](#) and [unmake move](#), [alpha-beta](#) search, and rudimentary [evaluation](#), published in 2003, further improving in subsequent versions. Version 0.05 disabled [checks](#) in [quiescence search](#) and had a slightly modified evaluation function, yielding in a significant increase in playing strength on short time controls ^[1]. Latest version is Anechka 0.08, released in July 2006 ^[2]. This version played the [CCCCISC 2008](#) in [Moscow](#) with 3½/7, and the [IOPCCC 2008](#) in [Łódź](#).

Selected Games

[IOPCCC 2008](#), round 2, [Tytan](#) - [Anechka](#) ^[3]

```
