Description

Tigran is a [bitboard](#) engine and applies [kindergarten bitboards](#) to determine [sliding piece attacks](#). The [search](#) is [PVS alpha-beta](#) with [transposition table](#), [null move pruning](#) and [late move reductions](#) inside an [iterative deepening](#) framework. Beside the dominating [material](#) term, the basic [evaluation](#) considers [king safety](#), [mobility](#) and [pawn structure](#).
