Ufim river ^[3]

Ufim,

a [WinBoard](#) and [UCI](#) compliant chess engine by [Niyaz Khasanov](#), written in [Delphi](#), first released in December 2000 as first Russian WinBoard engine ^[1]. It is able to play [Chess960](#) and to [learn](#) through an [epd-file](#) which acts as a kind of [persistent hash table](#). Ufim further features entertaining weak levels in the range of 700 - 2000 Elo ^[2]. The most recent release, version 8.02 from July 2006, played a strong [CCCCISC 2008](#) with 4/7. The author credits [Bob Hyatt](#), [Tom Kerrigan](#), [Dušan Dobeš](#), and [Fabien Letouzey](#) et al. for many ideas used in Ufim.
